Jason Obihara

Certifications/Projects in Data Science/Machine learning/Big Data/AI/Analytics. B.Eng Electrical and Electronics Engineering.
United Kingdom

Summary

I'm a data analyst open to new opportunities, with a strong foundation built through a data analytics bootcamp at Generation UK. The bootcamp was an incredible experience where I deepened my expertise in data analysis, learning how to transform data into actionable insights that drive business success.

I've had the opportunity to work on a range of data science, artificial intelligence, and data engineering projects, further broadening my skill set. I'm particularly well-versed in PowerBI and Tableau, using these tools to create powerful visualizations that help businesses make data-driven decisions.

I have over 6 years experience creating and developing solutions in machine learning and data science projects, ranging from regression, classification, clustering etc.

I thrive on using data to uncover insights, solve complex problems, and drive strategic outcomes. Whether it's optimizing processes, improving decision-making, or generating business value, I'm passionate about making a meaningful impact through data.

Let's connect if you're looking for a data-driven professional who can bring fresh insights and innovative solutions to your organization.
